Handbook of Reward and Decision Making May 02 2020

This book addresses a fundamental question about the nature of behavior: how does the brain process reward and makes decisions when facing multiple options? The book presents the most recent and compelling lesion, neuroimaging, electrophysiological and computational studies, in combination with hormonal and genetic studies, which have led to a clearer understanding of neural mechanisms behind reward and decision making. The neural bases of reward and decision making processes are of great interest to scientists because of the fundamental role of reward in a number of behavioral processes (such as motivation, learning and cognition) and because of their theoretical and clinical implications for understanding dysfunctions of the dopaminergic system in several neurological and psychiatric disorders (schizophrenia,

Parkinson's disease, drug addiction, pathological gambling, ...). Comprehensive coverage of approaches to studying reward and decision making, including primate neurophysiology and brain imaging studies in healthy humans and in various disorders, genetic and hormonal influences on the reward system and computational models. Covers clinical implications of process dysfunction (e.g., schizophrenia, Parkinson's disease, eating disorders, drug addiction, pathological gambling) Uses multiple levels of analysis, from molecular mechanisms to neural systems dynamics and computational models. " This is a very interesting and authoritative handbook by some of the most outstanding investigators in the field of reward and decision making ", Professor Edmund T. Rolls, Oxford Center for Computational Neuroscience, UK

Reinforcement Learning

From Scratch Feb 20 2022 In ancient games such as chess or go, the most brilliant players can improve by studying the

strategies produced by a machine. Robotic systems practice their own movements. In arcade games, agents capable of learning reach superhuman levels within a few hours. How do these spectacular reinforcement learning algorithms work? With easy-to-understand explanations and clear examples in Java and Greenfoot, you can acquire the principles of reinforcement learning and apply them in your own intelligent agents. Greenfoot (M.Kölling, King's College London) and the hamster model (D. Bohles, University of Oldenburg) are simple but also powerful didactic tools that were developed to convey basic programming concepts. The result is an accessible introduction into machine learning that concentrates on reinforcement learning. Taking the reader through the steps of developing intelligent agents, from the very basics to advanced aspects, touching on a variety of machine learning algorithms along the way, one

is allowed to play along, experiment, and add their own ideas and experiments.

The Effective Teaching of Language Arts Dec 09 2020

Field-tested and backed by sound research, this popular methods book provides readers with a broad background in language arts, including assessment and instruction in the major areas of speaking, listening, writing, and reading. Thoroughly encompassing the 'back-to-basics' movement and the trend toward literature-based instruction, it offers clearly developed methodologies and lessons, and makes extensive use of children's actual language samples to illustrate ways literature can enhance the development of language arts skills. Written by an award-winning author, the book focuses on material that embraces the needs of all learners: linguistically-different children, multicultural children, and children with learning disabilities and

handicaps. Emphasizing the importance of literature-based strategies and the identification of literature that can be applied to each of the language arts, it offers 'For Your Plan Book', a special section at the end of most chapters which provides concrete ideas, field-tested lessons and unit plans teachers can take right into their classroom. Literature chapters are now moved to the forefront of the book, enabling instructors to place a greater emphasis on literature-related language arts. Strong methodologies in the composition chapters now encompass the writing process, plus results of a five-year composition study of the relationships between writing and literature. Public school educators, parents in home schooling, and library personnel.

Teaching Modern Languages Jan 10 2021 Modern language classrooms are currently dominated by the

communicative method of language teaching. This reader draws together recent and newly commissioned papers to show the origins of communicative methodology, how it has developed, what its research justification is and how it can most effectively be used in the classroom. Various chapters examine the particular challenges of differentiation, teaching grammar, encouraging pupils to use the target language together and teaching a foreign language to children with special educational needs. The final section discusses ways of developing creativity in the modern languages classroom through the use of drama, creative writing and role play. Anyone involved in teaching modern languages will find this reader a rich source for reflection and good practice.
